 - [2.3 Precision vs CPU](#)

Earth shape

First, the user will have to define some data relative to the Earth shape and its rotating frame as shown on the next image:

Earth Shape:

equatorial radius:	<input type="button" value="Select"/> 6378.1363 km
flatness:	<input checked="" type="radio"/> direct <input type="radio"/> inverse
direct:	<input type="button" value="Select"/> 0.0033536
inverse:	298.187022900763
rotating frame:	<input type="button" value="GCRF"/> ▾
name:	Earth Shape

Frames configuration

Frames configuration is, by default, relatively simple as it has been considered the best ratio between precision and **CPU** time. Anyway, it is possible to make it more complex. Nevertheless, be careful about the **EOP** corrections as it needs some data provided by [[PATRIUS_DATASET](#)] (included in the jar). So, if the data for a given epoch are not available, the propagation will exit with an error status.

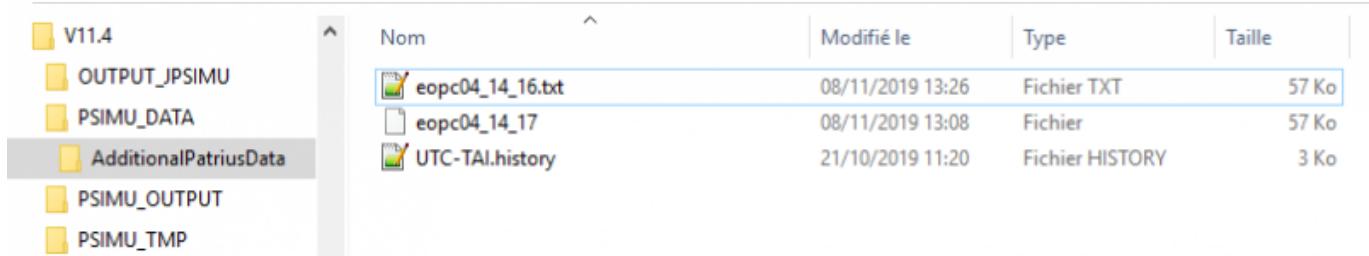

Note : in V11.0, by default configuration is the complex (factory) one.

How to update data

Nevertheless, in order not to wait for a new **PSIMU** version, it is always possible to put additional data (as **EOP** parameters or a new **UTC/TAI** gap) to the ones included Inside the [[PATRIUS_DATASET](#)] .jar file. This file may be used externally (when used **psimu-xx.x.jar**) or internally (when used **psimu-xx.x-jar-with-dependencies.jar**).

Since V11.4 version

Since this V11.4 version it is really simpler to take into account additional data: we have just to add them in the directory defined by the **ADDITIONAL_PATRIUS_DATA** variable of the psimu.properties file (no need to respect the original hierarchical structure of **PATRIUS_DATASET** but be careful to respect the exact names)!

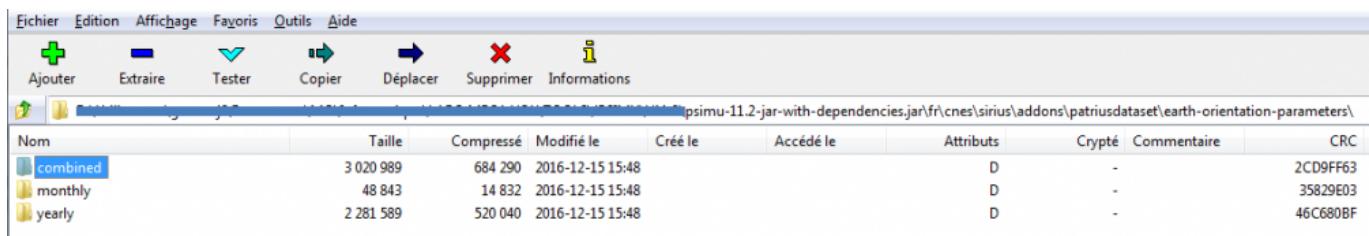

Nom	Modifié le	Type	Taille
eopc04_14_16.txt	08/11/2019 13:26	Fichier TXT	57 Ko
eopc04_14_17	08/11/2019 13:08	Fichier	57 Ko
UTC-TAI.history	21/10/2019 11:20	Fichier HISTORY	3 Ko

For versions previous to V11.4

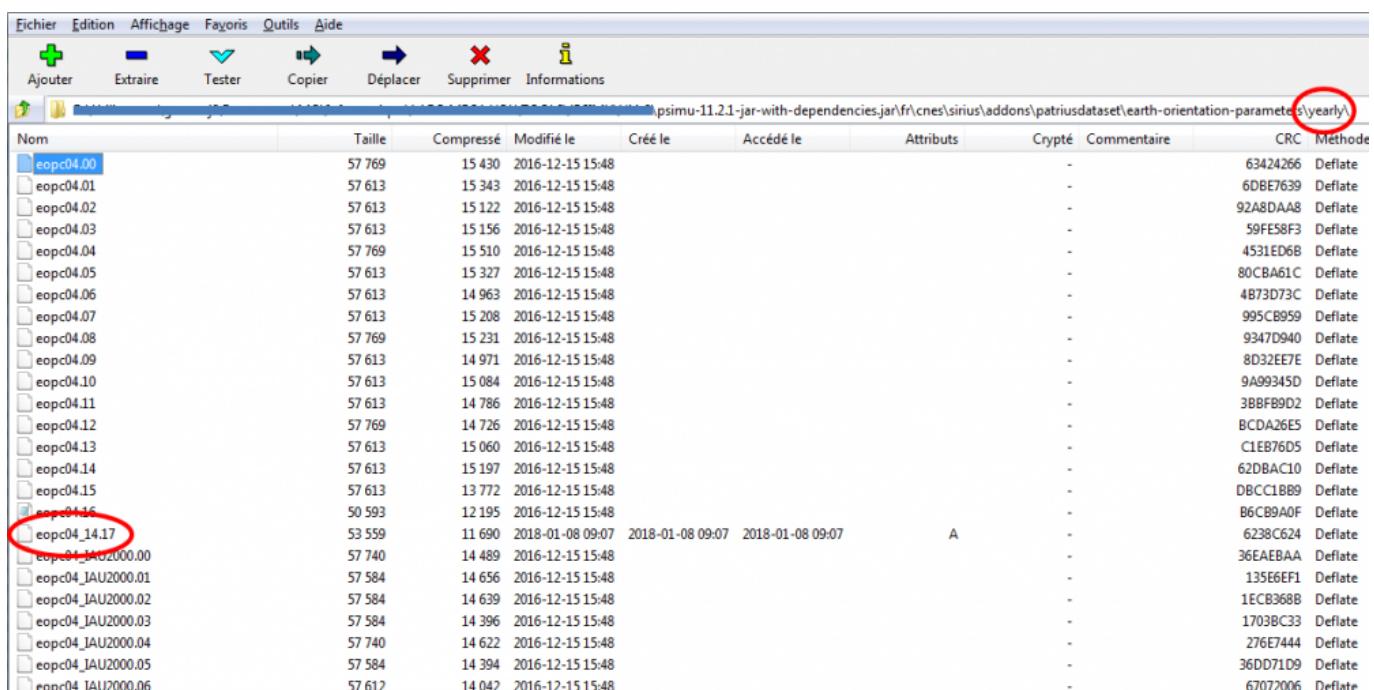

Let us show how to add, for example, some **EOP** data for year 2017.

- First, open the jar file using an application allowing to work with compressed files as [7-Zip](#)
- Then go through the .jar tree to reach the *fr/cnes/sirius addons.patriusdataset/earth-orientation-parameters* directory ...

Nom	Taille	Compressé	Modifié le	Créé le	Accédé le	Attributs	Crypté	Commentaire	CRC
combined	3 020 989	684 290	2016-12-15 15:48			D	-		2CD9FF63
monthly	48 843	14 832	2016-12-15 15:48			D	-		35829E03
yearly	2 281 589	520 040	2016-12-15 15:48			D	-		46C680BF

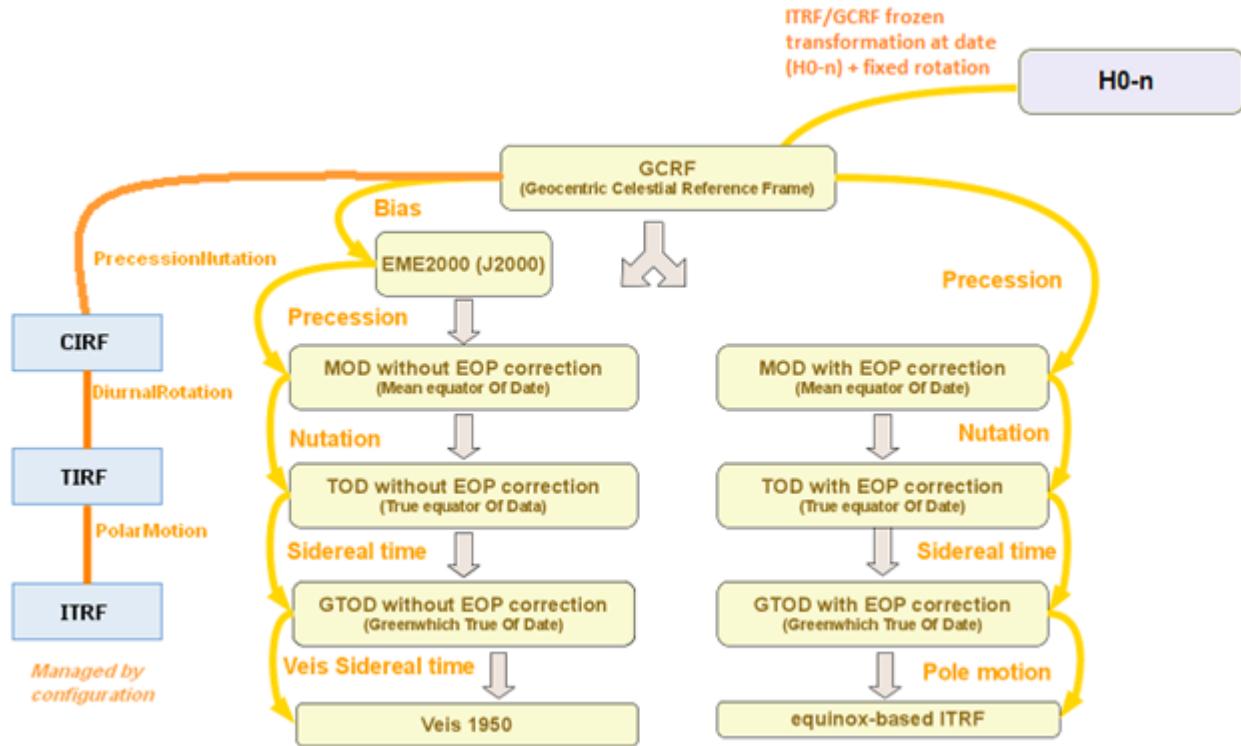

- At last, add inside the *yearly* subdirectory, a file obtained from the [IERS site](#) ... now you are able to propagate during all the year 2017 !

Frames dependencies

The following diagram explains the links between all considered frames.

Precision vs CPU

In the table below, we can see an example of precision versus CPU time depending on the frames configuration and for a 30 days LEO propagation:

Case	Corrections	Max position error (m)	Max velocity error (m/s)	CPU time (s)
1	All (IERS2010)	-	-	4.24
2	All except EOPs	14.6	1.68E-02	4.02
3	Only Precession-Nutation	14.6	1.68E-02	2.88
4	No corrections	469	5.42E-01	1.97

Here is the example of the "factory" configuration for IERS 2010:

Customized frame configuration (GCRF → CIRF → TIRF → ITRF)

Convention:	<input type="button" value="iers2010 ▾"/>
Mode:	<input type="radio"/> custom <input checked="" type="radio"/> factory
Polar Motion (ITRF to TIRF):	
Tides Correction:	<input checked="" type="checkbox"/>
Option:	<input checked="" type="radio"/> interpolated <input type="radio"/> direct
Libration Correction:	<input checked="" type="checkbox"/>
S Prime Correction:	<input checked="" type="checkbox"/>
EoPs correction:	<input checked="" type="checkbox"/>
Diurnal Rotation (TIRF to CIRF):	
Tides Correction:	<input checked="" type="checkbox"/>
Option:	<input checked="" type="radio"/> interpolated <input type="radio"/> direct
Libration Correction:	<input checked="" type="checkbox"/>
Precession Nutation (CIRF to GCRF):	
Precession-nutation Correction:	<input checked="" type="checkbox"/>
Constant rotation:	<input type="checkbox"/>
Option:	<input checked="" type="radio"/> interpolated <input type="radio"/> direct
EoPs correction:	<input checked="" type="checkbox"/>
EOP history data:	
EoPs 2000 History:	<input checked="" type="checkbox"/>
Interpolator	<input type="radio"/> HERMITE <input checked="" type="radio"/> LAGRANGE4 <input type="radio"/> LINEAR
